

Saskatchewan's Lakes & Rivers are at Risk!

The risk of zebra mussels is real and we are fighting to keep them out of Saskatchewan.

Neighbouring provinces and states are infested and we don't want them to be carried into our lakes. Lake Winnipeg as well as lakes in Montana are already infected.

The provincial government is leading this effort and have dedicated significant human and financial resources to this fight, but we all need to help with extra resources.

If you spend time in a boat or enjoy the life on or around the lakes and rivers of our province, it is time to **step up!**

Whether you are a company, group, individual or family, the Aquatic Invasive Species Task Force needs your support.

Please act soon and be part of the fight!

Aquatic Invasive Species Task Force is a non-profit organization tasked with educating the public about species invading Saskatchewan's lakes and rivers.

Please complete the form and send us your contribution to make sure the 2018 on-water season is zebra mussel free. We need to act NOW!

Partnership Form

An army of people and businesses is needed to help keep invasive aquatic species at bay. Your investment will help protect Saskatchewan's lakes and rivers.
